

Applications

Drinking Water

Consumers, who are concerned about fluoride in the municipal water supply for health reasons and require its removal, can benefit by the use of a fluoride removal cartridge at the Point of Use (POU).

Private Wells

Some areas of the country have high levels of naturally occurring fluoride. Wells supply 15% of American populations with drinking water, and these wells are not subject to EPA regulations. These wells provide safe clean water, but occasionally can become contaminated, resulting in illness.
